Github | LinkedIn | Portfolio

Full stack web developer with over 3 years of professional experience designing, building, and maintaining production web applications for government and healthcare organizations. Skilled at translating real-world business processes into working software, with a track record of owning projects end to end, from requirements gathering through deployment and ongoing support. Adapts quickly to new environments, tools, and technologies, and works well independently or as part of a team.

Skills

- Full stack development: **React, TypeScript, Nest JS, Laravel, RESTful APIs, microservices architecture**
- Databases & data integrity: **PostgreSQL, relational databases, large-scale data migration**
- Infrastructure & deployment: **Docker, AWS, microservices integration**
- Version control: **Git, GitHub, GitLab**
- Design & analysis: **UI/UX design (Figma), system requirement analysis**
- Professional skills: **time management, clear communication, adaptability, attention to detail, creativity, collaboration**

Experience

Computer Programmer II **February 2026 – Present**

Department of Social Welfare and Development

- Designed and developed a vehicle booking module for an existing administrative system, adding status tracking, dispatching, automated notifications, and reporting features
- Delivered ongoing end-user support after deployment, gathering and acting on feedback to improve system usability
- Building a new asset inventory system (Nest JS, React, TypeScript, PostgreSQL, Docker) designed to work alongside an existing legacy system that users reported as slow and unreliable; government policy requires the legacy system to remain in use, so the new system is being developed to fill functional gaps it does not yet cover

Computer Programmer **October 2023 – February 2026**

Bicol Regional Hospital and Medical Center

- Automated recurring tasks, including database backups, using bash (Linux) and batch (Windows) scripting
- Built the frontend for a Hospital Based Cancer Registry, including interfaces for chemotherapy cycle monitoring, patient profiles, and printable forms
- Maintained and administered Telehealth, an online teleconsultation system, and developed a patient scheduling feature with automated email notifications
- Maintained, administered, and continued development of an inventory system; migrated hundreds of thousands of records across systems while preserving data integrity
- Improved UI/UX and report generation, giving users the ability to customize data formatting and enhancing the styling of printed reports
- Built a document management system from scratch, providing centralized document access and version tracking

Junior Python Developer **November 2024 – June 2025**

Freelance | Part-time

- Contributed to the development and maintenance of a social media platform
- Debugged user interface issues, including styling inconsistencies, to improve overall usability
- Implemented a user suspension feature as a safer alternative to account deletion

Education

BS Information Technology **August 2019 – July 2023**

Bicol University, College of Science
